Math in My Life: How an Accidental Background in Mathematics has Benefited Me in Unexpected Ways

Dr. Molly Homer, Advisor, WIU Centennial Honors College

“Although my background in mathematics was for the most part unplanned, it has been useful in ways I never expected over the course of my working life. Since I graduated from college thirty years ago, I have had three distinct careers. I have used math in each, and in several cases my mathematical training helped me find more creative approaches and solutions to problems.

“During this talk, I will discuss my work in computer graphics, linguistics, and academic advising, and explain how mathematics has been useful in each.”

If you have any questions, please contact Math Club President Audrey Fletcher at a-fletcher@wiu.edu.
