

The Math Club Presents: Dr. Ealy A Brief Introduction to Public Key Cryptography

When: Wednesday, April 16th

Where: Morgan 202 at 5:30

Abstract

With the recent actions of Edward Snowden, encryption has made an appearance in the news. I will provide an introduction to cryptography, including an example of public key cryptography, which allows individuals to transmit secret messages to each other without needing to first know a shared secret code or secret "key". Time permitting, I will include a brief overview of SSL and the recent Heartbleed bug.
