A Telescope and a Bean Field: Visualizing a Map of the Universes

We live in a wonderful location to view the universe and begin to visualize where we are located in it. With a telescope and a little bit of help from some books or apps, you can view our solar system, all kinds of objects in our Milky Way galaxy, nearby galaxies, and even the super-cluster of galaxies in which the Milky Way belongs.

Weather permitting, we will go outside and see what we can see!

Speaker: *Dr. Douglas LaFountain*

If you have any questions, please contact Math Club President Audrey Fletcher at a-fletcher@wiu.edu.
